CONTROL rbf+log1p+ref (homoscedastic 285.3, reference — NO verdict): holdout parity, same layout and axes as fig1
n_0 = 16
RMSE 1,806 MWh cov95 33/48
median half-width latent 1,761 / total 1,882 MWh
holdout (48 designs)
training points (latent band)
Predicted load shed [MWh, thousands]
Actual [MWh, thousands]
n_0 = 32
RMSE 1,456 MWh cov95 26/48
median half-width latent 851 / total 1,041 MWh
Actual [MWh, thousands]
n_0 = 48
RMSE 1,703 MWh cov95 32/48
median half-width latent 1,353 / total 1,508 MWh
Actual [MWh, thousands]
PROVISIONAL
Dark = latent (model-only) band; pale = total (noise-inclusive) band. cov95 attaches to the TOTAL band only. Bars clipped at the frame. Axes match fig1/fig1c per n0.
